

Ask For Help

Objective: To Make an Android Application for Finding and Hiring Domestic Helpers.

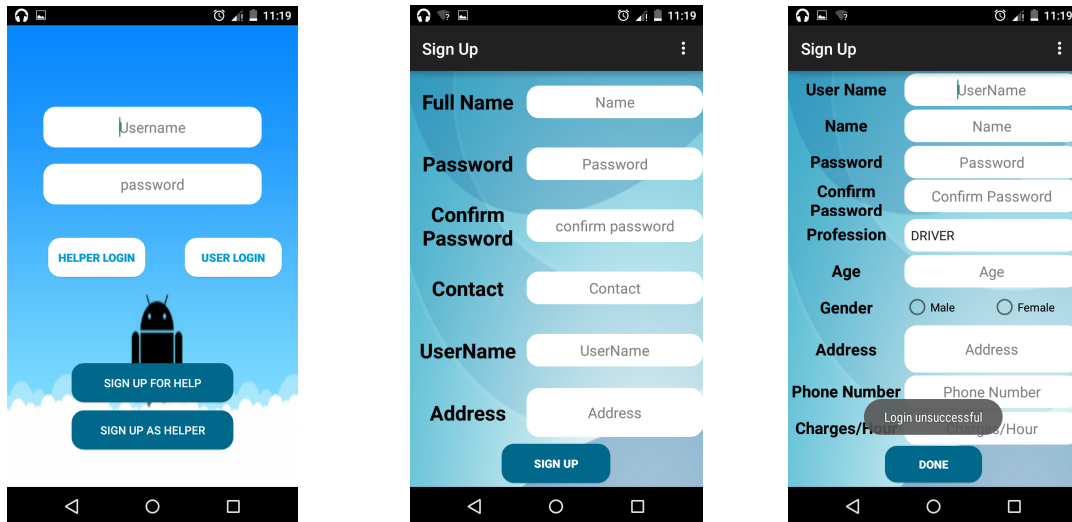

Target Audience: We aim to target the household service providing community which includes Electricians, Plumbers, Maids, Cooks, Baby Sitters, Drivers etc and those who require the services.

Our Aim was to build an app which enables you to hire domestic service with the click of a button.

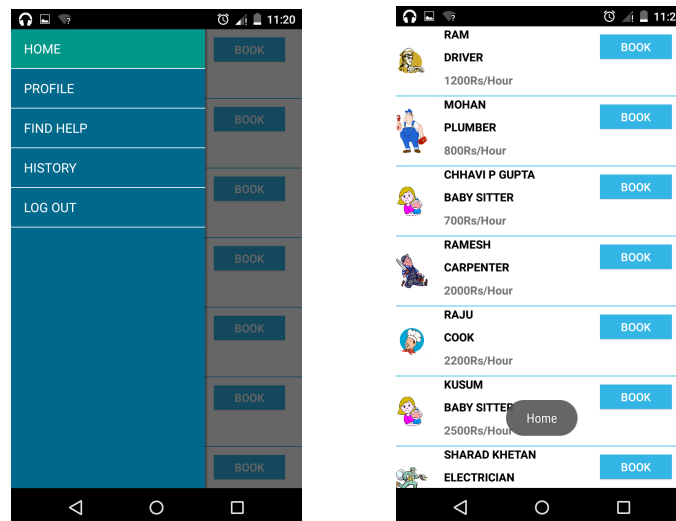

App Design:

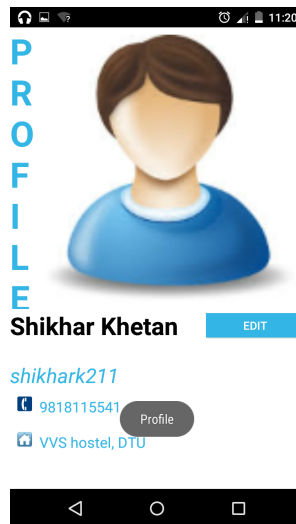

Our App starts with a login page. Every new visitor has to register either as a user or as a helper on the app. The sign up process is really simple. All you need to do is fill a form.

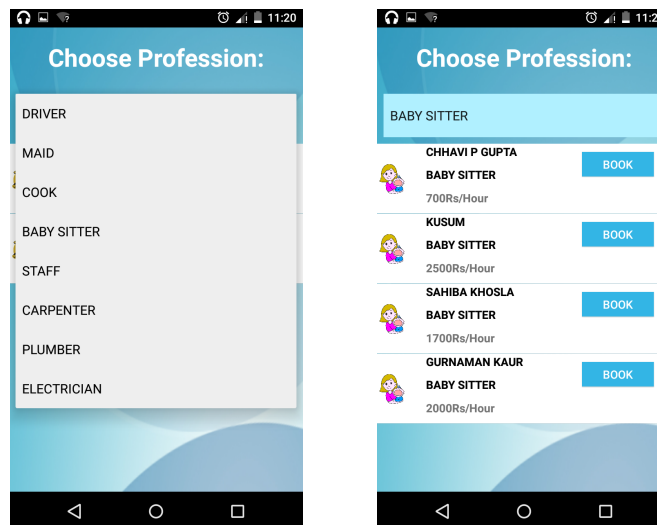

If you sign in as a user, you can view the domestic helpers registered with us around you on the home screen. Moving through the app can be done using the navigation drawer.

Home: Displays a list of services available around you by fetching your location

Profile: Displays your profile with an option to edit. The authenticity of the profile is checked by verifying the account on email.

Find Help: This page helps you to categorize the help around you on the basis of preferred Service. It has two filters, Location nearest to you by default and Service by Preference.

History: Shows your booking History.

Log Out: Log out from the app.

Booking Services:

To Book a Helper, you can either view the helpers profile first and then proceed with booking or you can directly click on the book button to select your dates. Once you select the dates, The app sends an automated text message to the helper mentioning the users name, address, contact number and Date of booking.

Call Helper directly: You can also call the helper directly and talk to them on your own terms

Rate our helpers! We have also provided an option to rate our helpers so that fellow users find it easier to get trustworthy helpers.

Helper Profile:

The Helper Profile displays the following- Name, Age, Gender, Profession, Charges per Hour, Rating, Address, Phone Number and a Display Picture. It has the option to call or book the helper.

We also have the option to sign in as a helper. If the helper has a smart phone, He or She can manage their Account and View Job Notifications.
